

WEEK:- 16

Topic: Excel Automation using Pandas and OpenPyXL, Record Creation, and Exports

Objectives:

To understand Excel automation techniques using Pandas and OpenPyXL, automate record management processes, and generate structured reports and exports efficiently.

Learning Outcomes:

- Learned Excel automation using Pandas and OpenPyXL.
- Understood data manipulation and record management techniques.
- Gained knowledge of report generation and export functionalities.
- Developed skills in handling spreadsheet-based data processing.
- Improved automation and data management capabilities.

WORK SUMMARY:

During Week 16, I worked on Excel automation using Pandas and OpenPyXL, record creation, and export functionalities. The training focused on understanding how Python libraries can be used to automate repetitive spreadsheet operations and improve data management processes. I attended technical sessions and participated in practical exercises to explore data manipulation, worksheet management, and automated reporting techniques.

Throughout the week, I gained practical experience in creating, updating, and managing records within Excel files programmatically. I learned how to use Pandas for efficient data processing and analysis, while OpenPyXL was utilized for handling workbook operations, formatting, and report generation. Special emphasis was placed on automating data entry, exporting processed information, and reducing manual effort through efficient workflows. I also explored methods for improving data accuracy and consistency within spreadsheet-based systems.

The activities carried out during this week enhanced my understanding of automation and data processing techniques. Regular testing, debugging, and mentor guidance helped me improve my problem-solving skills and develop efficient solutions for handling large datasets. The knowledge gained during this week provided a strong foundation for data-driven application development and business process automation.

Activities Performed:

- Automated Excel operations using Pandas and OpenPyXL.
- Created records and generated automated exports and reports.
